

Effective Technologies For Building Product Manufacturers

InterSpec provides software solutions and spec writing services built on its patented e-SPECS technology.

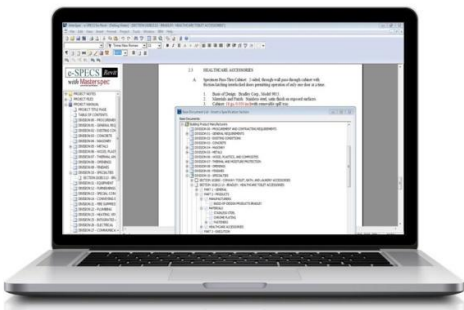

For architects and engineers, e-SPECS specification software saves time and cost while producing a higher quality project and ensuring BIM models are coordinated with the specs.

InterSpec's Building Product Manufacturers (BPM) Program will help your company grow revenue, deliver more integrated product design solutions, increase market awareness and get specified in more construction projects.

“ e-SPECS facilitates a directness of specifying our system solutions while providing the design community a significant resource. ”

— C. BLACK, Market Development Manager BASF POLYURETHANE FOAM ENTERPRISES

Get Your Products Specified More Often

Make sure you aren't giving away FREE 3D objects only to have your competition end up in the Project Specs - used for bidding!

The only automated way to also include the correct specification for your Revit objects is the InterSpec BPM Program.

e-SPECS interfaces with Revit's BIM parametric database, instantly updating project specifications to the requirements of the building model – generating integrated project specifications and drawings. Contact us to learn more.

Did You Know?

80% of customers are more likely to use BPM specs integrated into e-SPECS.

“ e-SPECS enables us to deliver more design products to our customers without requiring additional time and money to be spent coordinating the models and specs. ”

– M. VICKERY, National Sales Manager BRADLEY CORPORATION

BIM INTEGRATION

BPMs listed in master specifications are included in the project specifications through the “out of the box” BIM integration – even for generic objects!

PROFESSIONAL SPECS

To get your products specified, your company needs a CSI MasterFormat 3 Part specification ready for designers to use. Don't have one? We can cost-effectively write it for you.

DISTRIBUTION

To distribute your proprietary product specification, InterSpec will create an intelligent “Checklist” for your specs so all e-SPECS users will be able to easily insert your section into their project manuals.

FEATURED LISTINGS

Get your company and products in front of specifiers, architects, engineers & designers while they're selecting products and specifying construction projects with a Featured Listing in e-SPECS.
